explanation: parts are numbered from the head to the tail.
- The center rectangles of the cuboid-templates(1,3,5,7,9,11,12) are directed upwards and the dark rectangles downwards, the rectangles below the center rectangle are directed towards the front(head).
- the 2dimensional "fishbone"-parts(2,4,6,8,10) consist of front side and back side. The left parts are in each case directed to the front(head) and the right parts to the back.

tip: cut these parts along the rectangle, glue them together and then use a cutter knife to cut the pieces as you like.
- glue the pieces together so that the bottom of the silverfish is flat.

==> good luck :-) !!
