How does a centaur wipe its ass?

>> Anonymous 10/06/14/Mon/00:08:05 No 35327442 ►
The same way a horse does

>> Anonymous 10/06/14/Mon/00:08:43 No 35327455 ►
How does it use a toilet?

>> Anonymous 10/06/14/Mon/00:09:22 No 35327461 ► >>35327462

Extreme flexibility, tools, rubbing against other objects, help from other centaurs.
Take your pick, I guess

Few posts later..

The horse anus is a marvel of evolutionary biology.

Like most mammals, rhythmic contractions of the bowels move the feces up to the end of the gut to be expelled.

What sets the horse anus apart is the bafflingly complex autonomic contractile motion of 4 muscular rings which function like sphincter gullies. As the feces is squeezed out, the rings expand and the outermost ring is retracted into an interior sheath resembling the human foreskin, leaving an interstitial tissue fold to open air.

The two inner rings then contract, and push apart, severing the horse feces cleanly, allowing to drop free as the outer ring folds back through the interstitial flap, creating a intrinsic wiping motion with the fourth ring as it contracts back into the horses rectum.

This advanced biological mechanism is so effective that many industrial companies have copied Nature's design for self-cleaning viscous liquid dispensers housed within complex machinery.

Today I learned about why horse anuses benefit engineering. Thanks, /tg/.

I've never been on /an/ but I'm guessing it's something like this.

>>35329437
At first I thought this was going to be some disgusting fetish thing, then I learned something about making a better ketchup dispenser.

>>35329437
I'm having a hard time visualizing this.
