Note: Don't cut the small line in the middle of the helmet. It is to indicate the place to glue the small parts to the top. See photo.

After folding and gluing the scabbard let it dry completely, then with a toothpick or small object enlarge slightly the inside in order to be able to insert the sword.

Cut and glue a piece of red color paper (not included in the model) to the back of the cape before gluing it onto the body.

Remember also to get all the pieces ready and try them out before gluing to see how they fit together as certain parts need to be glued first.
