

biwin.co.uk

The image shows two identical net diagrams for a 3D container, likely a small box or bin. Each net consists of a central rectangular panel with a handle on top and a vertical slot on the right side. The handle is a rounded rectangle with a central opening. The vertical slot is a narrow rectangle. The net is designed to be folded into a 3D shape, with the central panel forming the front and back, and the side panels forming the sides. The two nets are identical and are shown side-by-side, separated by a vertical line.
